

GRID

The planetary computer powered by people

One-page overview

Useful mining. Real rewards.

Turn idle GPUs into a global supercomputer.

Join with a working GPU. Do real work—AI, graphics, simulation, future low-latency games. Earn GRID. Sell for cash or crypto. Datacenters welcome. Home miners stay first-class. Tokens are earned on a schedule—not printed without limit.

Mine useful work

Not empty puzzles. Verified real jobs. You get paid.

Earn. Cash out.

GRID for compute. Sell for dollars, BTC, or crypto.

Everyone belongs

One card or a full rack. Little miners protected.

WHY NOW

AI and live digital worlds need more compute than any one company can own. Millions of GPUs already exist—homes, workshops, former mining farms. GRID connects them so demand finds supply, and operators get a fair market.

TOKENS STAY UNDER CONTROL

Hard max supply—no infinite mint.
Fixed rewards each period—busy days don't print extra GRID.
Big fleets capped: even if Google joins, they can't vacuum most emissions.
Home miners keep a protected share.
Burns when capacity is purchased.

YEAR 1 — GENESIS EARN (NOT A TESTNET)

Mainnet from day one. Miners earn real GRID for real work—but tokens unlock over time. Not free work for buyers; not open spend-for-capacity chaos. After Year 1, full market opens. Measure hardware. Reward operators. Protect the float.

For miners & GPU owners

- Keep mining with GPUs you already have
- Ex-ETH fleets have a new home
- Your power, heat, and schedule limits
- Home rigs earn—even when big iron joins
- Edge nodes matter when ms matter
- Cash out when unlocks + market allow

For builders & buyers

- Global compute without owning a fleet
- Pay for capacity when you need it
- AI, graphics, simulation—one network
- Scale up for spikes; down when quiet
- Future: competitive games & live worlds
- Pay for verified work—not promises

THE SIMPLE LOOP

1

Join with GPU

2

Do real work

3

Earn GRID

4

Unlock & cash out

The world's largest supercomputer won't be built in one place.

It will emerge from millions of machines—working together.
